DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-3 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Linzer et al. (US 6,108,039).

Re claims 1 and 3, Linzer discloses a device and its method for recursive motion vector estimation comprising:

means (ME0 1/64 of fig. 5) for generating a plurality of candidate vectors from stored vectors (24 of fig. 2, e.g. the motion vectors are stored in the motion estimation processor (24), where the motion estimation is described in the figure 3, 54, 60 of fig. 3);

means (610 of fig. 5) for selecting one of these candidate vectors to generate a selected vector (ME0-MVT is generated by motion vertical field select(610 of fig. 5));

means (Top to top OR Bottom to top SEARCH of fig. 5) for generating a plurality of test vector from the selected vectors (the selected ME0-MVT is generated by ME2 ¼ and Top to top Search to produce ME20-MVT as called a test vector);

means (650 of fig. 5) for select one of the test vectors to generate output vector (a single motion vector ME2-MVT is selected from the test vectors ME20-MVT);

means for storing output vector (20 of fig. 2, e.g. the selected test vector is stored in the buffer (28) with the encoded video data).

Linzer further discloses the method for estimating motion vector can be repeating the steps above for each of plural macroblocks, which is called a recursive motion vector estimation (col. 22, lines 5-6).

Re claim 2, Linzer further discloses adding 0 to each component (8x8 or 4x4) of the selected vectors into the selecting test vector that still has the same result.

Conclusion

1. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See the previous Office Action, Paper No. 10.
